

Name of the project:

Permafruit, household product for climacteric fruit ripening deceleration

Brief description of the idea

Households throw away one third of fruit they buy and contribute to 1.6 tons of food waste per year. We have developed a product that decelerates ripening of fruit, which is simple to use and suitable for household use. It's doesn't only keep your fruit fresh longer, at a fraction of the price of fruit thrown away it also saves you money. We are happy to announce that patent for this product is pending.
